Scope of Work: Waterproofing, Metal Wall Panels

Project Data

Location
San Dimas, CA

General Contractor
Tilden - Coil Constructors

Project Value
\$618,537

Completion Date
December 2014

The Bonita Center for the Performing Arts is a 700 seat theatre in the city of San Dimas and was designed to serve the Bonita Unified School District with performances from local school campuses of all grade levels, as well as professional performances.

BEST was selected to furnish and install various scopes of the Building Envelope including waterproofing, metal wall panels and sheet metal. Sheet waterproofing with flexible rubberized asphalt, self-sealing air and vapor barriers, sheet metal flashings, gutters, downspouts and louvers, along with factory fabricated smoke and roof hatches.

A unique feature of the theatre is the Solar Shading system which detects the amount of sun light, wind and rain and moves the louvers to a pre-set position to optimize daylight entry and protect the louvers in storms conditions.
