

# 2000 Avenue of the Stars

Building Use: Commercial Office Building  
Scope of Work: Waterproofing, Vegetative Roof

## Project Data

Location  
Los Angeles, CA

General Contractor  
Hathaway Dinwidde

Project Value  
\$2,073,000

Completion Date  
May 2007

The vegetated “roof” is the green area at the ground floor level. It is actually the roof over underground parking. As the roof garden is basically a lawn, the depth of engineered soil is very shallow. The structural concrete deck was waterproofed with hot rubber by Hydrotech and above this the typical vegetated roof system was installed comprising of root barrier material, insulation, a water retention layer and filter fabric. The soil/sod was laid over this assembly.
